

FiberLase™

Redefining Access & Energy Delivery.

The FiberLase™ CO₂ laser fiber is a class of its own. A high quality, durable & flexible fiber served with a collection of dedicated operational tools.

The FiberLase™ CO₂ laser fiber allows easy [access to difficult-to-reach anatomy](#) and provides a variety of delicate treatment options.

FiberLase™ can be easily integrated into your existing surgical environment allowing you to comfortably perform a wide variety of procedures, [making the laser an easy-to-use tool](#).

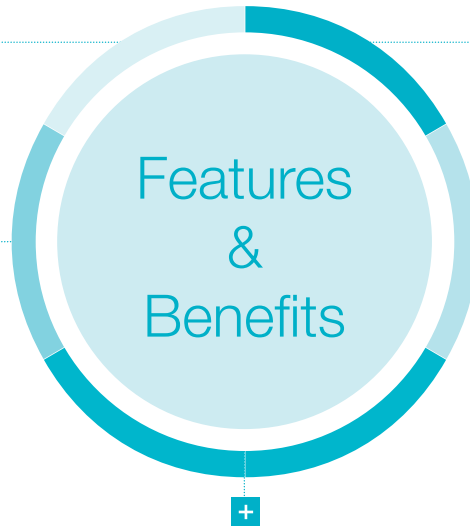

FiberLase™ allows you to [expand from the operating room to the outpatient environment](#), [save costs](#), and [enable periodical treatments of recurring conditions under local anesthesia](#).

Renewable Fiber Tip

Can be cleaved and revived during use, facilitating smooth operation and cost effectiveness.

30% Longer Fiber

Compared with other CO₂ laser fibers, for greater ease in procedure set up.

Adjustable Aiming Beam

Enables precise positioning to ensure the desired tissue is targeted.

60% Greater Energy Transmission

Enables sufficient delivery of CO₂ laser energy (in comparison with other CO₂ fibers based on Lumenis internal bench test).

Used with Lumenis Operational Tools

Compatible with a wide variety of rigid and malleable handpieces used in different surgical suites.

Common Procedures in Otolaryngology, Head & Neck and Gynecology

Lumenis CO₂ lasers are fully featured, with selectable settings for power mode, power level and exposure time - for optimal tissue, ablation, coagulation, incision and excision.

Otolaryngology, Head & Neck

Tumor Surgery in the larynx, pharynx, nasal, ear and oral structures and tissue

Benign and malignant lesions, nodules, Polyps, cysts, synechea, fibromas and tumors (larynx, pharynx, trachea, tracheobronchial/endobronchial)

Adult and juvenile papillomatosis

Tonsillectomy

Stenosis, including subglottic stenosis

Gynecology

Endometriosis

Adhesions

Condyloma

Myomas

Ovarian cysts

Lumenis offers a unique set of tools enabling a versatile surgical approach either through the vagina or through minimally invasive laparoscopic settings.

Note: A complete list of ENT & GYN indications can be found in the user manual

Risk Information

CO₂ lasers (10.6 μm wavelength) are intended solely for use by trained physicians. Incorrect treatment settings or misuse of the technology can present risk of serious injury to patient and operating personnel.

The use of Lumenis CO₂ laser is contraindicated where a clinical procedure is limited by anesthesia requirements, site access, or other general operative considerations. Risks may include excessive thermal injury and infection. Read and understand the CO₂ systems and accessories operator manuals for a complete list of intended use, contraindications and risks.

Product Specifications:

Single use

Supplied sterile

Dimensions

2 meters length, 1.04 mm outside diameter, 0.5 mm inside diameter

Spot Size

500 μm at fiber output

The fiber is adequate to support robotic assisted surgery with the addition of the designated Lumenis Drop-In-Guide
